

for HP LaserJet Printers

HP Personality Module

- **IPDS native emulation**
- **Plug n'Print**
- **TCP/IP Support**
- **IBM emulations: 3812/16, 4028, 43xx et InfoPrint**
- **High Speed**
- **Remotely Upgradable**

The Blue Kit™ IPDS Flash/Dimm

All HP LaserJet printers use the de facto PCL standard to control the output to the printed page. The comparative standard for the IBM mainframe and AS/400 environment is called AFP/IPDS. By adding The Blue Kit™ IPDS Flash/Dimm, IBM IPDS emulation is added to the HP LaserJet printers without having to change the existing LAN interface.

Simply plug in The Blue Kit™ IPDS Flash/Dimm, power up the printer and set-up the IBM required parameters using the control panel of the HP LaserJet printer.

Your normal LAN printing will continue as before, but in addition you can receive AFP/IPDS output over TCP/IP from IBM OS/390, OS/400 and AIX systems to be printed on your standard HP LaserJet printer.

The Blue Kit™ IPDS Flash/Dimm can also be used to add IPDS emulation to HP LaserJet printers connected to IBM Coax (3270) and Twinax (5250) systems. Using the MPI Tech Coax or Twinax interfaces (HostCom) for physical connection, The Blue Kit™ IPDS Flash/Dimm will add full IPDS compatibility and offer direct replacement of IBM printers using the HP LaserJet printers.
